

Onscreen Keyboards

Microsoft Onscreen keyboard

Available in the accessibility options with Microsoft operating system. Older versions have little functionality but new operating system allow keyboard resizing, word prediction and switch access.

Typematic

Not vista compatible Supplied with
Genie Joystick

Penfriend

Cost £120 pounds. It has an onscreen keyboard (resizable), some very good word prediction, and a lot of other functionality <http://www.penfriend.biz/>

Grid2 or GridKeys

About €400. It has a very customizable keyboard layout, again some very good word prediction and even lots of excellent other functionality, such as switch access or mobile phone access. Maybe overkill of your needs is for just a basic onscreen keyboard with word prediction.

Click-N-Type

This is Free. Resizable Onscreen keyboard with basic word prediction. Works with Vista I think.

<http://www.lakefolks.org/cnt/#Download>

RapidKeys

This is free. Resizable keyboard, but no word prediction. Although you can also download some free word prediction to go along with it. Vista ?

Saw

This is free. Similar to the Grid or Gridkeys. More than just an onscreen keyboard as the layout can be customized. A little complicated to setup initially.
